Deep cleanse of the back using professional grade skin care, steam, warm towels, gentle exfoliation, extractions of any back acne “bacne”, enzyme mask, & massage with pure oils.

# Body Treatments

## **Eletrotherapy (30-60-mins) \$60 - \$100**

Electrotherapy is a weight loss treatment using a muscle stimulating machine that is excellent for weight loss and muscle toning. It is an effective, safe, non-invasive and fast treatment sends electrical impulses to the muscles and causes them to contract. The electrical current creates a significant energy demand on the muscles so surrounding fat cells are burned for energy. It also strengthens tones and firms the abdominals, glutes, legs, arms and love handles achieving rapid results with no downtime.

## **Body Contouring (90-mins) \$150**

The main goal is to achieve homeostasis, body balance, detoxification and enhance one's beauty naturally. After your treatment you may feel instantly invigorated, with a noticeable improvement in skin tone, bloating and swelling. This treatment is also very popular to fight cellulite caused by oedema, which is the accumulation of fluids in the deepest fat layers of the skin. It helps flush the liquid that is deposited between the cells and cannot move on their own, improving the appearance of the skin. This type of sculpting massage enhances body contours by improving circulation, reducing cellulite and localized fat as well as increasing muscle firmness.

## **Buttocks Vacuum Therapy (45-mins) \$85**

This treatment is carried out with suction cups that are connected to a special machine that produces suction tissue. The glasses are manipulated and are handled in a special way to achieve desired effects such as removal of cellulite, body contouring ,and firming as well as lifting. Includes essential oil experience per session!

## **FIBROBLAST PLASMA LIFT**

This innovative technology is a great alternative to cosmetic surgery. Plasma Lift is a surface only, non-invasive and non-surgical procedure that is a fraction of cosmetic surgery costs. The procedure utilizes an electric spark to create a controlled carbon dot (freckle sized burn) on the top layer of mapped out numbed skin which instantly dehydrates and retracts the skin. Under the carbonized treatment skin surface, the heat created from the spark travels to the skin dermis to stimulate collagen and elastin...  
which is a Win WIN with the results and the cost.
